EMERGENCY!

GARY NULL ULTRAGRAV™ WATER FILTER

WITH NEW "METALGON"

NATURAL DISASTERS

WATER SUPPLY SHUT OFF

WORLD TRAVEL & CAMPING

FIELD & MILITARY

- The **Gary Null UltraGrav Emergency Filter** unit is designed for use where pressurized and/or suitable potable water is not available.

- The **UltraGrav Ceramic Filter** uses ceramic microfiltration plus "**METALGON**" filter media technology to remove microbes, chlorine, chemicals, fluoride, heavy metals, sediment, debris, turbidity, bad taste & odor. **The "METALGON" removes fluoride and heavy metals.**

- Uses gravity to push water through the UltraGrav Ceramic to supply thousands of gallons of clean, safe drinking water from any fresh water source. The water is then stored in the lower chamber ready for use.

UltraGrav Emergency Filter

- The unit can hold up to 2 gallons of water in the top and lower chambers. For continued use, the top chamber must be refilled with source water. Unit can hold up to 4 filters for maximum water production.

UltraGrav Filter Specifications

Dirt, Sediment Removal	0.9 Microns >99.9%
Disinfection ByProducts	>95%
Chlorine Removal	>99%
Chloramine Removal	>99%
Turbidity (cloudiness)	>98%

METALGON Fluoride & Heavy Metal Reduction

Fluoride @ 0.8 ppb	>92%
Lead, Copper	>99%
Pharmaceuticals	>95%
Bad Taste & Odor	>95%

Unit Dimensions & Specifications

Filter Capacity	Up to 4 Standard filters
Water Production	1/3 gallons/hour per filter
Water Capacity	2 Gallons Upper Reservoir 2 Gallons Lower Reservoir
Dimensions (telescoped)	11.25" W x 17.25" H
Dimensions (assembled)	11.25" W x 28.5" H

ULTRAGRAV™ EMERGENCY GRAVITY FILTER

In the event of an emergency, producing enough water to supply your family can be a life saver!

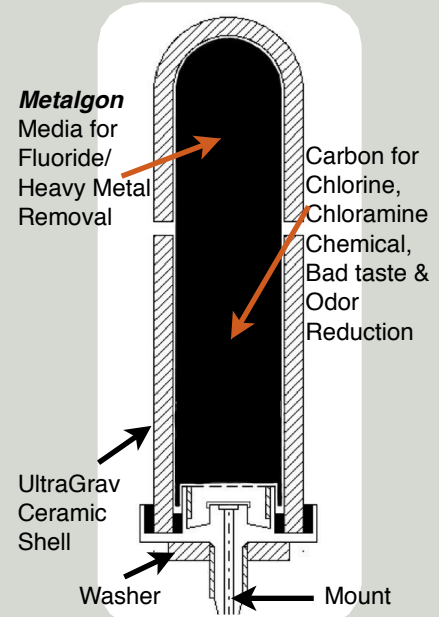

Each UltraGrav Emergency Filter provides you with the ultimate protection that you and your family needs in the event of an emergency. If your water supply gets shut off and there is no source of clean water, the UltraGrav Emergency Filter can produce thousands of gallons of safe, clean, great tasting water from any fresh water source.

The filters are rated to last approximately 1000 gallons and can be cleaned to remove any particulates from the outer ceramic shell of the filter. This will restore the flow rate for longer use and prolong the life of the filter. The housing can be disassembled and cleaned to remove particulates. This will extend the period of time between filter changes.

The UltraGrav Emergency Filter is supplied with 2 Standard UltraGrav ceramic filters. Each UltraGrav filter provides 1/3 gallon of filtered water per hour.

To maximum water production for larger families, adding a total of 4 UltraGrav Filters will provide you with larger water volume production.

For a limited time only, we are offering a **Special Sale** that can save you money and assure you and your family the safest drinking water available in any emergency.
